

1. Write a program that takes length as input in feet and inches. The program should then convert the lengths in centimeters and display it on screen. Assume that the given lengths in feet and inches are integers.

Sample Output:

```
Enter two integers, one for feet and one for inches: 3 5
```

```
The numbers you entered are 3 for feet and 5 for inches.
```

```
The total number of inches = 41
```

```
The number of centimeters = 104.14
```
